BULLETIN

AUCTION SUNDAY 20TH MARCH

There 333 lots to go under the hammer with some very interesting plants listed. We ask members to help on the day with set up starting at approx. 7.30am and help throughout the day.

SUPPER ROSTER. This month **Tinka** has volunteered to do sandwiches and **Ray Schuback** will do cake. A big thank you to last month's volunteers and also many thanks to other members who contributed to the supper table.

GUEST SPEAKER. This month we have the very knowledgeable **Ken Russell** as our guest speaker. Ken always delivers a very interesting talk on all things orchidaceous and who cannot forget what a wondrous tonic molasses is on your plants! Definitely not a talk to miss!

PRESIDENT'S REPORT: March already, how time flies. Don't forget the auction coming up on Sunday the 20th. Auction catalogues are now available and have already been sent out with last month's bulletin, and there are some exceptional plants listed. Help on the day to set up from 7:30am would be greatly appreciated. As young as my back is I can't do it all alone!

Tinka has said that yet again she will post in the bulletin encouraging members to switch from mailed bulletins to emailed copies. Hopefully if it's written in the bulletin twice more people will take notice, as there are approximately 50 members still receiving hard copies, and postal costs are becoming prohibitive. The committee has discussed raising the cost of membership for members who still wish to receive hard copies to cover these costs.

I'm looking forward to hearing from our guest speaker for March, Ken Russel, always a very interesting and informative talk. I look forward to seeing you all soon. Dylan.

ISSUE 541 March, 2016

PATRON lan Nelson

PRESIDENT Dylan Morrissey

VICE PRESIDENTS Cary Polis Angie Sulfaro

SECRETARY

Tinka Riddell tinkariddell@ yahoo.com.au 9940 0797

TREASURER Jo Ann Payne

LIBRARIAN Guy Cantor

COMMITTEE

Gary McDougall Joy Lumby Val Houley

ALL

CORRESPONDENCE

TO The Secretary, MWOS Inc., 3 Kristine Place, Mona Vale. NSW. 2103.

NEXT MEMBER'S MEETING

Thursday 24th March, 2016 at 8pm Cromer Community Centre, Fisher Road North, Cromer.

NEXT COMMITTEE MEETING

Thursday 7th April 2016 at the DYRSL 7.30pm.

LIBRARY. The library still operates so please make use of this facility as we have some very good books. We will be culling some books in the future which will be available to members.

SALES TABLE. Honest Gary has pots in all sizes and also plant labels. Please bring in your excess plants for sale.

Reminder - All members who bench plants at monthly meetings will be eligible to receive a raffle ticket and be in the draw to win a prize. The tickets will be on the table in front of the library. Don't forget to take a separate ticket for the badge draw when you sign in.

Repeating what our President has written, as postage has now risen to \$1.00 it would be appreciated if as many members as possible could receive their Bulletin by email. The cost of your membership no longer covers the cost of printing and postage. At the moment 50 members still receive their Bulletin by mail. Please see Tinka at the meeting or email to let her know. There will be some hard copies available at the meetings.

DIARY DATES 2016 March 20th AUCTION March 24th Members Meeting April 9th-10th Collector's Plant Fair, Hawkesbury Race Club, Clarendon April 15th & 16th Castle Hill International Orchid Fair at the showground April 28th Members Meeting May 13th-15th Orchids Out West, Hawkesbury Race Club, Clarendon May 26th Members Meeting June 9 – 12 North Shore OS Winter Show at St. Ives Shopping Centre June 16th – 18th Winter Show Dee Why Grand (to be confirmed) June 23rd Members Meeting June 25 - 26 Mingara Orchid Fair & Show July 14-16 North Shore OS Show, Gordon Shopping Centre July 28th Member's Meeting August 5-7 Orchids by the Sea August 5-7 National Orchid Extravaganza, Dural August 19-21 St. Ives Orchid Fair August 25th Member's Meeting September 10-11 ANOS Waringah Group Spring Show, Forestville Memorial Hall. Manly Warringah Orchid Society Inc. and contributors to this Bulletin, disclaim any liability for damage or losses which may be contributed to the use of any material published in this bulletin.

Our very own Cary Polis showed us this photo at the committee meeting and what a great photo it is. In it you can see an Assassin bug attacking a Dendrobium Beetle on a Neobenthamia gracilis (recent name change back to Polystachya neobenthamia).

These are a fantastic bug to have in the garden, or orchid house, as they are great predatory insects. Interestingly they consume their prey by injecting them with a potent saliva that digests the inside of their prey and is then sucked out through their powerful rostrum (or proboscus, similar to butterfly and moths' mouthparts).

Be careful though, as if handled they will attack humans with a very painful bite.

It would be great if any members that see unusual insects send us more photos, as they are always interesting to learn and talk about, and it's fascinating to learn about the dynamic ecosystems that evolve in and around our Orchid collections.

CONGRATULATIONS to Ralph Payne who celebrated his 80th birthday on 25th February and on the following Saturday celebrated with his family and friends with a lunch on the Central Coast.

Show Marshal Report For February 2016

<u>Hybrid of the Month :</u> Dendrobium [Den.] Kuniko <u>Grown by</u>: B. Britton

What a beautifully colored Dendrobium Bernie has here. It is a primary hybrid bred from these two species, Dendrobium [Den.] victoriae-reginae x Dendrobium [Den.] goldschmidtianum (syn. Dendrobium miyakei)

[Den.] victoriae-reginae X

[Den.] goldschmidtianum

These two pictures show where this plant gets its color from and has similar growth to both parents.

Specimen Plant of the Month : "Dendrochilum uncatum"

Rchb.f., Bonplandia (Hannover) 3: 222 (1855). Grown by: Tinka Riddell

Dendrochilum make a great specimen and a showy plant and these grow very well in our climate and are not a hard one to grow They grow ok in a shade house and there is a large group of them but there are ones that are hot growers. Below shows where this specie comes from *The* Philippines and Taiwan. In the Philippines, this orchid grows as an epiphyte on Luzon Island where it is found in the provinces of Albay, Aurora, Batan, Benguet, Cagayan, Ifugao, Laguna, Nueva Vizcaya, Pampanga, Quezon, Rizal, Sorsogon, and Zambales at 3300-7550 ft. (1000-2300 m). On Taiwan, plants have been reported from the south end of the island on the Haengchun Peninsula as well as from Lanyu Island (Botel Tobago) where it grow in thickets at 1650-2600 ft. (500-800 m).from Orchidwiz. I put this in as it gives the heights where they come from and that is a good indicator what condition is required.

Specie Plant of the Month : "Prosthechea brassavolae" (syn. Encyclia brassavolae)

(Rchb.f.) W.E.Higgins, Phytologia 82:

376 (1997 publ. 1998). Grown by: Peter Christie

This is a lovely orchid grown by Peter. Notice it too has been moved into a new group, was also known as an Epidendrum. Way back I had a nice plant that grew hanging up in the shade house and grew well till I divided it and lost it again. It is a high grower by the notes below and comes From southern Mexico southward through Central America to western Panama. In Mexico, this orchid is found in the states of Guerrero, Oaxaca, Veracruz, and Chiapas where it grows in rather wet pine-oak forests over a wide range of elevations at 3950-8200 ft. (1200-2500 m). In Guatemala, plants are found near Cobán in Alta Verapaz at elevations up to 7850 ft. (2400 m). Plants have been reported in the mountains of Costa Rica and Panama, but details of habitat location and elevation were not given. In Panama, plants were reported to have come from Chiriquí Province, but according to Williams & Allen ([1946-1949]1980) they have not been collected there since Wasarscewicz reported a collection. from Orchidwiz These are well worth looking for and sometimes can be under an old name as above.

Novice plant of the Month: Phalaenopsis Unknown

<u>Grown by:</u> Ros Mathews

This a nice orchid grown by Ros and has grown it inside her home as a plant she bought and from memory this was a secondary spike. A lot of people buy or

are given one to enjoy then don't know what to do. Don't cut the spike off at the bottom but go down from where the first flower was and you will see a node on the spike, cut it off just above that and when right will produce a secondary spike or two, sometime can develop a plantlet and when it gets roots can be cut off and you have a new plant. The other thing is a lot of these imported plants are in sphagnum moss so watch that it has not gone sour and if the plant has out grown the pot may have to repot but use good quality large bark so it drains quickly after water.

To all members, start keeping on to those plants going to flower for the shows as we need them to make the display. Also watch out for the slugs, snails and grubs, take care to prevent them.

MIRIAM ANN ORCHIDS NEWSLETTER ALAN'S COLUMN MARCH 2016.

As autumn is getting close the weather is starting to change down here in the Blue Mountains. As the equinox gets closer (22 March) we will start to see the difference in our plants – long day, short day etc. So now is the time to start getting things ready for the winter months. Cleanup the glass house or flowering shed, remove weeds from under benches etc. Some growers like to sprinkle some copper sulphate under the benches. This helps to keep disease down and weeds.

Cymbidiums: If you are a cymbidium grower, now is the time to top dress your plants with MERRICOTE. Check for two spotted mites <u>under</u> the leaves. If you want to use organic safe materials, you may spray with ECO OIL mixed with NATRASOAP®. Over the last couple of years some growers have been using PROCIDE® 80SC to control their mites. Use at 35-50 ml per 100 litres of water for mites. Aphids. Loopers, Mealy Bug use 25 ml per 100 Lt of water. No wetting agent is needed. With your cymbidiums keep foliar nutrients over the plants weekly. Use MERRIFERT or one of the PETERS products. Still water in the early evening during March.

CATTLEYAS: can now be divided if needed. During March – April spray plants with a Seaweed or Fish emulsion product – weekly to ten days. Look for scale on your catts. Water when starting to dry out. SOFTCANE DENDS are now powering ahead. Keep fertilising with a good general purpose fertiliser weekly. Watch for loopers on the leaves. Spray with MAVRIK® or SUCCESS® ,DIPEL® is a good alternative.

PHALAENOPSIS are now growing extremely well. During autumn the nights will start to cool down. Fertilise weekly with your favourite brew. Use one that does not have too much urea in it, plus watch the ammonium for of nitrogen in your favourite fertiliser! Does your bottom leaves turn yellow, once plants start spiking! Answer next month. Keep humidity up – good ventilation and air movement. Watch your shading.

The last couple of months we have been talking about miltoniopsis – the wonderful pansy orchid. I was going to print a photo of MILTONIOPSIS RUBENESQUE "JJUICY" This cross was registered in 2007 by Mr Okika of Hawaii. The parents being Pearl Ono X Paradise Park. In the mean timer you can read an excellent article in a recent copy of "ORCHIDS". In the 21st Anniversary of Parramatta and District Orchid Society there is an article on culture of Miltonia vexillaria by Juan RestrepoA. In fact this edition of the Orchid News is worth a read.
