#### President's Report.

At last month's meeting we were treated to a great presentation by Gloria and Alan Cushway on how to prepare your plants for shows. It was an excellent talk with some practical demonstrations where they did not hold back on sharing their "trade secrets" with us. After watching that, I fully understand why they are perennial show winners. Again, the meeting was well attended and there were many quality plants on the bench. This month, in conjunction with the giving out of the growing competition plants, we will have as our guest speaker, Scott Barrie, who will be talking on all things Zygopetalum, which will hold us in good stead in the growing competition. I'd like to thank those members who exhibited and helped at the Orchids By The Sea Show. It was very successful on all counts with many quality plants making up a beautiful display. Of course, we welcome members to sell their plants at our shows, but it is very important that plants are well established and healthy. It is important to remember that the general public don't have much idea about orchid culture, so they need to start off with a decent plant to avoid disappointment. Next up we have the St Ives Orchid Fair, so we need your plants early on setup day which will be Thursday August 15 from 9am. This is our biggest event for the year, so if you have something worthy, we need it for our display. See you there.

**GUEST SPEAKER:** Scott Barrie from Barrita Orchids will be our Guest Speaker this month. Scott will talk about Zygopetalum culture and breeding. Definitely not one to be missed.

ST. IVES ORCHID FAIR - Members putting their plants in our display are requested to bring them in between 9 and 9.30am so we can see how to do the layout. If you feel your plants are worthy please bring them in. Please fill in the attached list and bring it in with your plants

Also this month we will be handing out Zygopetalum plants for our growing competition. There will be one plant per membership ie 1 per single and 1 per family. You will be given a number and handed the plant that corresponds with your number. We hope to see this plant every three months to check on progress. Please make sure you are a financial member to receive this offer.

**SUPPER ROSTER** Thank you to last month's volunteers and helpers for your contribution. There is no one on the roster for August so please bring in a small contribution for the supper table.

#### Ramble:

You may recall that I have been filling you in on the progress of my seedlings of Dendrobium Red Dame x Dendrobium canaliculatum. Well, excitement has been dampened somewhat because one of the two spikes has had a catastrophic setback. It appears to have been attacked by some micro pest and if I'm lucky, one bud may continue to develop. For now, the spike on the other plant is developing strongly and even starting to show some colour. The accompanying picture tells you everything. The old saying goes that you shouldn't count your chickens before they hatch, but sometimes it's hard not to, especially with first flowering seedlings.

Speaking of chickens, in the last week or so, I have noticed quite a few plants making spikes, especially in the Vandaceous section. Again, it is hard not to get excited. The Australian natives are looking good mostly, and I'm sure that it's not lost on most of you that we are going to have a bumper season with Dendrobium speciosum. My Dockrillia species are doing particularly well and some are already flowering, especially things like Dockrillia teretifolium. My Dockrillia rigida plants have been spot flowering for the last few months but they are now more consistent. It's amazing with these little gems how much different clones vary when you look closely. They are one of my favourites (just another one!).

I have noticed some slug damage in the hothouse lately, even though I have sprinkled some pellets around. Fortunately I have excellent lighting in there, so I can go out there at night and catch them in the act.

Weeds are still thriving and they can get out of control if left unchecked. This is a constant battle for me and most growers I suspect. Alas, physical removal is the only safe solution. A few months back, I mentioned the notion of having a bit of a working bee with Paul and Guy at each other's houses. A fantastic idea but very difficult to organise. Could you imagine how much could get done with such a system? Anyway, I'm sure that you all have similar problems ie not enough time.
